

CLAIM SET AS AMENDED

Claims 1-6 (CANCELED)

7. (PREVIOUSLY PRESENTED) A structure for reducing noise and vibration in a scroll compressor, comprising:

an outer casing operatively connected with a suction pipe and discharge pipe;

an inner casing engaged with an inner circumferential surface of the outer casing;

a driving motor engaged with the inner circumferential surface of the inner casing for generating a rotational force;

a driving shaft engaged with a rotor for transmitting the rotational force;

a fixed scroll forming a discharge port, and arranged with an orbiting scroll so as to have a plurality of compression pockets, said orbiting scroll eccentrically engaged with the driving shaft, wherein said compression pockets continually move during an orbital motion of said orbiting scroll;

a frame affixed on the inner circumferential surface of the inner casing for supporting the driving shaft; and
